

KS4 2025-2027 Year 10 Options – Course Information Leaflet

BTEC Tech Award in Construction and Built Environment

The BTEC Construction course offers a wide and varied introduction into the world of Construction in both theory and practical situations. The course encourages students to develop knowledge, design ideas and practical skills through lessons and research into this vocational area developing skills and understanding of the country's infrastructure and flood defence systems. Additionally, students will study various methods of construction used in low-rise building developments and the part that construction plays in supporting new domestic and industrial developments.

The evaluative and practical skills learnt throughout the course are essential for further and higher education. The course is assessed through an examination along with a building design and practical assessment.

The content of the course covers aspects of:

- Construction Technology
- Construction in Practice
- Construction and Design

Further information is available from Mr Dew, Head of Construction
