A Level Maths Curriculum

The curriculum for mathematics aims to ensure all pupils:

- become fluent in the fundamentals of mathematics, including through varied and frequent practice with increasingly ٠ complex problems over time, so that pupils develop conceptual understanding and the ability to recall and apply knowledge rapidly and accurately
- reason mathematically by following a line of enquiry, conjecturing relationships and generalisations, and developing an ٠ argument, justification or proof using mathematical language
- can solve problems by applying their mathematics to a variety of routine and non-routine problems with increasing sophistication, including breaking down problems into a series of simpler steps and persevering in seeking solutions

Building on GCSE Maths: Mathematics is an interconnected subject in which pupils need to be able to move fluently between representations of mathematical ideas. Pupils will enhance their range of skills acquired at GCSE through the A-level curriculum. It will emphasise how mathematical ideas are interconnected and how mathematics can be applied to model situations mathematically using algebra and other representations, to help make sense of data, to understand the physical world and to solve problems in a variety of contexts, including social sciences, and business. It prepares students for further study and employment in a wide range of disciplines involving the use of mathematics.
